# WHAT IS CRYPTO CURRENCY

## What is cryptocurrency in simple words?

A cryptocurrency is **a digital currency, which is an alternative form of payment created using encryption algorithms.**

The use of encryption technologies means that cryptocurrencies function both as a currency and as a virtual accounting system. To use cryptocurrencies, you need a cryptocurrency wallet.

# WHAT IS BLOCKCHAIN

**A Blockchain is a type of distributed database or ledger—one of today's top tech trends—which means the power to update a Blockchain is distributed between the nodes, or participants, of a public or private computer network. This is known as distributed ledger technology, or DLT**

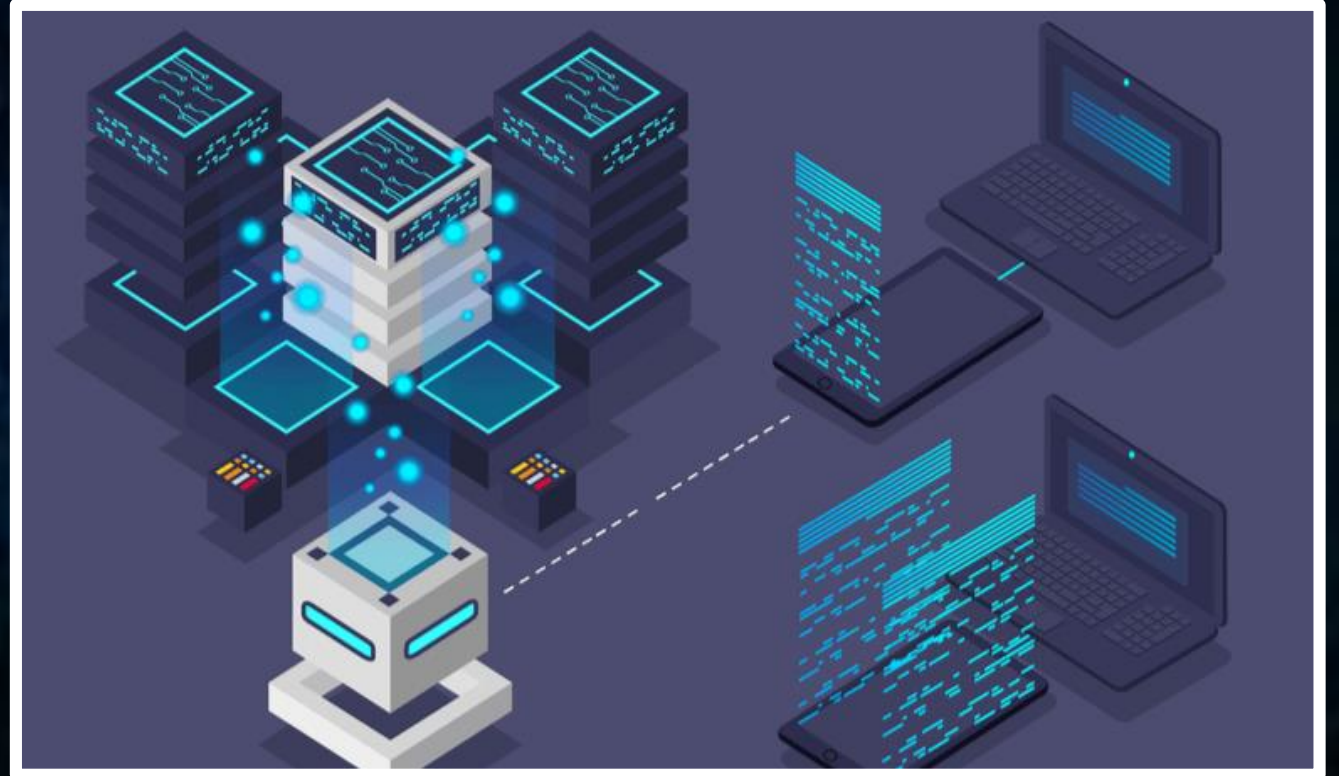

# DECENTRALIZATION?

**What does "decentralize" mean? What are the advantages and what are the benefits?**

**Decentralized marketing is created with an automated contract that offers you maximum security and sustainability. A smart contract is an automatic execution algorithm. It exists within the Binance Blockchain, one of the TOP cryptographic currencies.**

# SMART CONTRACT ?

Smart contracts, like cryptocurrencies, are decentralized. They work strictly according to the underlying program, without the possibility of subsequently Changing the defined execution. The code that contains all the logic of the contract expiration is on the blockchain and all calculations are provided by millions of computers around the world. This ensures that there is no risk of hacking into the smart contract and stopping the project.

The blockchain is an immutable record of transactions and information, which is cryptographically protected from any subsequent manipulation using thousands of independent computers worldwide
